

# E-Commerce API Documentation

**Name:** ABIREBEYE ABAYO SINCERE

**Reg No:** 22RP05419

---

## Introduction

This API is built to serve as the backend for an e-commerce application. It provides endpoints for:

- User Registration and Authentication (JWT-based)
- Product Management (CRUD)
- Order Processing (with product stock tracking)
- Admin-level access control for managing users, products, and orders

The API supports both authenticated and unauthenticated endpoints, and it enforces proper access levels using middleware.
